

Our forests are alive with activity!

How many animals can you find hidden in the Lamington National Park grid?

Names can go left-to-right, right-to-left and top to bottom.

Look up, look down and look all around. If you look very closely, you will notice shy creatures hiding in the forest. Many creatures travel between the sub-tropical rainforests and the dry eucalypt forest searching for food. Some animals live in the canopy and rely on giant trees with hollows to raise their young.
